AGENCY OVERVIEW

ALAMEDA COUNTY WATER DISTRICT

About ACWD Water: The Alameda County Water District (ACWD) was established in 1914 and provides drinking water to residents and businesses in Fremont, Newark and Union City. Its mission is to provide customers with a reliable supply of high-quality water at a reasonable price. ACWD manages and maintains over 930 miles of water main pipelines, 13 reservoirs and water storage tanks, and three treatment facilities and is governed by a 5-member Board of Directors.

87,000

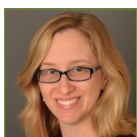

Imported Water
40% of treated water demands
met from State Water Project

WHY ARE THE STATE WATER PROJECT AND DELTA CONVEYANCE PROJECT IMPORTANT TO ACWD?

"The Alameda County Water District depends on the State Water Project for 40% of its supply, serving 342,000 customers as part of the 27 million Californians who rely on this system. The State Water Project and the planned Delta Conveyance Project are important to maintaining a reliable water supply and strengthening our water system to better adapt to increasing environmental challenges and shifting conditions—helping ensure a reliable future for the Tri-Cities and all Californians."

Judy Huang, ACWD Board President

"Long-term water supply planning is crucial for sustainable water management in California. The state's water supply is vulnerable to climate change, drought, sea level rise and seismic events. Imported supplies from the State Water Project and enhanced reliability that will come with the Delta Conveyance Project help safeguard the state's water, assisting agencies in meeting our customers' demands."

Laura Hidas, Director of Water Resources

Modernizing California's Water Infrastructure

The Delta Conveyance Project (DCP) is a proposal to modernize water infrastructure in the Sacramento-San Joaquin Delta by creating an additional point of diversion along the Sacramento River coupled with conveyance facilities in the Delta. The DCP is intended to restore and protect the reliability of State Water Project (SWP) and to ensure California's largest supply of clean water is climate resilient.
